

Test all dogs that present with vomiting, anorexia,
or abdominal pain to evaluate for pancreatitis

Investigate

- Consider additional diagnostics
 - Ultrasound
 - Radiographs
 - Quantitative Spec cPL® Test (test code SCPL)
- Check for risk factors and concurrent disease
 - Gastroenteritis
 - Foreign body

Manage

- Provide supportive therapy
 - Fluids
 - Pain management
 - Antiemetics
- Treat primary disease appropriately, if present
- Low-fat diet

Monitor

- Trend with quantitative Spec cPL Test
- Recheck cPL levels in 2–3 weeks or sooner if clinical signs develop or worsen
